

# Comments

- Clear and clean code with few comments is better than bad code with a lot of comments
- Sometimes useful to describe basic information using a comment
- Sometimes it is useful to explain the intent behind a decision using a comment
- Clarifying an obscure line can be useful
- Useful in warning others of consequences if function is ran in certain scenarios
- Todo comments are useful to remember what needs to be implemented. They should be prefaced by `//TODO`
- Always write the best comment you can when you decide to write one
- Avoid useless comments
- Comment must be precise
- Journal comments are unnecessary
- Position markers should be used sparingly
- Commenting out code is useless because we have source code control systems
- Comments must only describe code it is near and not system wide code
- Comments must not contain too much information and must be to the point
